

TOILET PAPER KIT

INSTRUCTIONS

1. Boil water in a large pot and remove from heat.
2. Dip a roll of TP in hot water until fully saturated. Remove TP and place on a cooling rack to drain. Remove the inner cardboard tube & dispose of it. Allow the TP roll to cool so it is warm, but not hot.
3. Put the saturated TP roll into the included filter patch bag
4. Pour the included grain spawn into the center of the TP roll (it's okay if it spills out of the roll into the bag)
5. Close the bag with a rubber band above the filter patch.
6. Place the bag in a dark area with a temperature between 65-75 F for about 3 weeks or until the roll looks colonized.
7. After about 3 weeks, move the bag to an area where it can get some sunlight.
8. Open the bag, and begin misting the roll 2-3 times a day. Close after misting.
9. You mushrooms should start fruiting in 7-10 days.
10. Harvest your mushrooms & make a delicious meal!
